Future extension — ServiceNow normal change after approval

Not built yet. Orange outline = new. After the manager and the Entra ID team approve, a normal change is raised automatically; ER-02 runs only once the change reaches Implement, and closes it afterwards.

Microsoft Entra ID

ER-02 creates the app registration, enterprise app and role assignments exactly as today. Only **when** it runs changes.

Two modes (EntraSettings.ChangeMode).
gated: ER-02 waits for CAB and the change window (change reaches Implement).
record: the in-app approvals are enough; the change is raised, ER-02 runs at once, and the change is closed for the audit trail.

Decide with change management: assignment group, CI mapping from appCatID, change window, and whether production (appEnv P) is gated while D/L/T are record-only.

Future extension — sequence with a gated normal change

From the Entra ID team's approval to the closed change. Steps before that are unchanged.
